■ MODEL ANSWERS: Mathematics Paper 1: Arithmetic

Step-by-Step Solutions for Ayaan

A: 2025

Method: Step 1: Write the numbers in columns, aligning place values. Step 2: Add ones (0+0), tens (0+0), hundreds (0+5). Step 3: Add thousands (1+0). Total: 2025.

A: 2550

Method: Step 1: Write the numbers in columns, aligning place values. Step 2: Add ones (0+0), tens (0+0), hundreds (0+5). Step 3: Add thousands (1+0). Total: 2550.

A: 3075

Method: Step 1: Write the numbers in columns, aligning place values. Step 2: Add ones (0+0), tens (0+0), hundreds (0+5). Step 3: Add thousands (1+0). Total: 3075.

A: 1600

Method: Step 1: Write the numbers in columns, aligning place values. Step 2: Add ones (0+0), tens (0+0), hundreds (0+5). Step 3: Add thousands (1+0). Total: 1600.

A: 2125

Method: Step 1: Write the numbers in columns, aligning place values. Step 2: Add ones (0+0), tens (0+0), hundreds (0+5). Step 3: Add thousands (1+0). Total: 2125.

A: 2650

Method: Step 1: Write the numbers in columns, aligning place values. Step 2: Add ones (0+0), tens (0+0), hundreds (0+5). Step 3: Add thousands (1+0). Total: 2650.

A: 3175

Method: Step 1: Write the numbers in columns, aligning place values. Step 2: Add ones (0+0), tens (0+0), hundreds (0+5). Step 3: Add thousands (1+0). Total: 3175.

A: 1700

Method: Step 1: Write the numbers in columns, aligning place values. Step 2: Add ones (0+0), tens (0+0), hundreds (0+5). Step 3: Add thousands (1+0). Total: 1700.

A: 2225

Method: Step 1: Write the numbers in columns, aligning place values. Step 2: Add ones (0+0), tens (0+0), hundreds (0+5). Step 3: Add thousands (1+0). Total: 2225.

A: 2750

Method: Step 1: Write the numbers in columns, aligning place values. Step 2: Add ones (0+0), tens (0+0), hundreds (0+5). Step 3: Add thousands (1+0). Total: 2750.

A: 3275

Method: Step 1: Write the numbers in columns, aligning place values. Step 2: Add ones (0+0), tens (0+0), hundreds (0+5). Step 3: Add thousands (1+0). Total: 3275.

A: 1800

Method: Step 1: Write the numbers in columns, aligning place values. Step 2: Add ones (0+0), tens (0+0), hundreds (0+5). Step 3: Add thousands (1+0). Total: 1800.

A: 2325

Method: Step 1: Write the numbers in columns, aligning place values. Step 2: Add ones (0+0), tens (0+0), hundreds (0+5). Step 3: Add thousands (1+0). Total: 2325.

A: 2850

Method: Step 1: Write the numbers in columns, aligning place values. Step 2: Add ones (0+0), tens (0+0), hundreds (0+5). Step 3: Add thousands (1+0). Total: 2850.

A: 3375

Method: Step 1: Write the numbers in columns, aligning place values. Step 2: Add ones (0+0), tens (0+0), hundreds (0+5). Step 3: Add thousands (1+0). Total: 3375.

A: 1900

Method: Step 1: Write the numbers in columns, aligning place values. Step 2: Add ones (0+0), tens (0+0), hundreds (0+5). Step 3: Add thousands (1+0). Total: 1900.

A: 2425

Method: Step 1: Write the numbers in columns, aligning place values. Step 2: Add ones (0+0), tens (0+0), hundreds (0+5). Step 3: Add thousands (1+0). Total: 2425.

A: 2950

Method: Step 1: Write the numbers in columns, aligning place values. Step 2: Add ones (0+0), tens (0+0), hundreds (0+5). Step 3: Add thousands (1+0). Total: 2950.

A: 3475

Method: Step 1: Write the numbers in columns, aligning place values. Step 2: Add ones (0+0), tens (0+0), hundreds (0+5). Step 3: Add thousands (1+0). Total: 3475.

A: 2000

Method: Step 1: Write the numbers in columns, aligning place values. Step 2: Add ones (0+0), tens (0+0), hundreds (0+5). Step 3: Add thousands (1+0). Total: 2000.

A: 46/9

*Method: Step 1: Multiply the whole number (5) by the denominator (9): 5 * 9 = 45. Step 2: Add the numerator (1): 45 + 1 = 46. Step 3: Put this over the original denominator: 46/9.*

A: 47/9

*Method: Step 1: Multiply the whole number (5) by the denominator (9): 5 * 9 = 45. Step 2: Add the numerator (2): 45 + 2 = 47. Step 3: Put this over the original denominator: 47/9.*

A: 48/9

*Method: Step 1: Multiply the whole number (5) by the denominator (9): 5 * 9 = 45. Step 2: Add the numerator (3): 45 + 3 = 48. Step 3: Put this over the original denominator: 48/9.*

A: 49/9

*Method: Step 1: Multiply the whole number (5) by the denominator (9): 5 * 9 = 45. Step 2: Add the numerator (4): 45 + 4 = 49. Step 3: Put this over the original denominator: 49/9.*

A: 50/9

*Method: Step 1: Multiply the whole number (5) by the denominator (9): 5 * 9 = 45. Step 2: Add the numerator (5): 45 + 5 = 50. Step 3: Put this over the original denominator: 50/9.*

A: 51/9

*Method: Step 1: Multiply the whole number (5) by the denominator (9): 5 * 9 = 45. Step 2: Add the numerator (6): 45 + 6 = 51. Step 3: Put this over the original denominator: 51/9.*

A: 52/9

*Method: Step 1: Multiply the whole number (5) by the denominator (9): 5 * 9 = 45. Step 2: Add the numerator (7): 45 + 7 = 52. Step 3: Put this over the original denominator: 52/9.*

A: 53/9

*Method: Step 1: Multiply the whole number (5) by the denominator (9): 5 * 9 = 45. Step 2: Add the numerator (8): 45 + 8 = 53. Step 3: Put this over the original denominator: 53/9.*

A: 54/9

*Method: Step 1: Multiply the whole number (5) by the denominator (9): 5 * 9 = 45. Step 2: Add the numerator (9): 45 + 9 = 54. Step 3: Put this over the original denominator: 54/9.*

A: 55/9

*Method: Step 1: Multiply the whole number (5) by the denominator (9): 5 * 9 = 45. Step 2: Add the numerator (10): 45 + 10 = 55. Step 3: Put this over the original denominator: 55/9.*

A: 56/9

*Method: Step 1: Multiply the whole number (5) by the denominator (9): 5 * 9 = 45. Step 2: Add the numerator (11): 45 + 11 = 56. Step 3: Put this over the original denominator: 56/9.*

A: 57/9

*Method: Step 1: Multiply the whole number (5) by the denominator (9): 5 * 9 = 45. Step 2: Add the numerator (12): 45 + 12 = 57. Step 3: Put this over the original denominator: 57/9.*

A: 58/9

*Method: Step 1: Multiply the whole number (5) by the denominator (9): 5 * 9 = 45. Step 2: Add the numerator (13): 45 + 13 = 58. Step 3: Put this over the original denominator: 58/9.*

A: 59/9

*Method: Step 1: Multiply the whole number (5) by the denominator (9): 5 * 9 = 45. Step 2: Add the numerator (14): 45 + 14 = 59. Step 3: Put this over the original denominator: 59/9.*

A: 60/9

*Method: Step 1: Multiply the whole number (5) by the denominator (9): 5 * 9 = 45. Step 2: Add the numerator (15): 45 + 15 = 60. Step 3: Put this over the original denominator: 60/9.*

A: 675.0

Method: Step 1: Align decimal points. Add a placeholder 0 to 63.0 if needed to match decimal places. Step 2: Subtract normally, keeping decimal in line. 738.0 - 63.0 = 675.0.

A: 693.7

Method: Step 1: Align decimal points. Add a placeholder 0 to 64.8 if needed to match decimal places. Step 2: Subtract normally, keeping decimal in line. 758.5 - 64.8 = 693.7.

A: 712.5

Method: Step 1: Align decimal points. Add a placeholder 0 to 66.5 if needed to match decimal places. Step 2: Subtract normally, keeping decimal in line. 779.0 - 66.5 = 712.5.

A: 731.3

Method: Step 1: Align decimal points. Add a placeholder 0 to 68.2 if needed to match decimal places. Step 2: Subtract normally, keeping decimal in line. 799.5 - 68.2 = 731.3.

A: 750.0

Method: Step 1: Align decimal points. Add a placeholder 0 to 70.0 if needed to match decimal places. Step 2: Subtract normally, keeping decimal in line. 820.0 - 70.0 = 750.0.
