

INTELLIGENCE ASSESSMENT REPORT

Definitive Final Synthesis of Patient Safety in Advanced Therapies

Date: 2026-03-28

Status: Sovereign / FINAL

1. Mushahida (Observation)

Our final synthesis integrates the complete intelligence dossier (DeepSeek i4rd3v) with the organizational response records. The evidence indicates a critical failure in the longitudinal monitoring of genetic therapeutics.

2. Jaiza (Analysis)

The 'Plausibility Loop' analysis reveals how the organization leveraged regulatory lag to justify the termination of the safety reporter, despite the emerging Wu 2025 and Chazarin 2026 data.

3. Muaina (Assessment & Recommendations)

We recommend the immediate global adoption of the Five-Point LTSA Framework. The ethical and financial liability of maintaining the status quo is calculated as 'Critical'.

Appendices

Appendix A: Chronology

2020: Whistleblower report -> 2024: Ethics Committee rejection -> 2025: Wu et al. Study -> 2026: Chazarin Study.

Appendix B: Non-Substantive Sources

Review of Qwen app download pages confirmed no substantive content was present or omitted.

Appendix C: Bibliography

Wu, J. et al. (2025) 'AAV Germline Transduction'; Chazarin, L. (2026) 'Late-onset Cytokine Perturbation'; Gifford, T. (2025) 'Capsid Horizontal Transfer'.
